

ALIENS ARE AMONG US!

How to tell if *you* are an alien

- 1 **Unusual sleep patterns:** Because of the different length of the alien sun cycle, they often have trouble adjusting to our twenty-four hour days. Many aliens wake early or late, find themselves more energized during our nighttime hours, and need midday naps to function.
- 2 **Creative ability:** Aliens are obsessed with creative arts, such as music, reading, dance, or painting and drawing.
- 3 **Sensitivity to electromagnetism:** Aliens are prone to uncomfortable physical symptoms as a direct result of exposure to fluorescent lights, microwave ovens, television, and overhead power lines.
- 4 **Unusual dreams:** Aliens have a rich and fulfilling dream life, in which they dream vivid, color images. Often these dreams involve being able to fly.
- 5 **Uncommon physical characteristics:** While every attempt has been made to conform to human standards, aliens seldom accomplish this goal. Most of them have bodies that are less-than-ideal by our standards.
- 6 **Bizarre concept of humor:** Watch out for those who laugh at inappropriate times, such as during formal ceremonies, or who seem to have no sense of humor at all.
- 7 **Talking to themselves:** Aliens can often be spotted by their habit of talking aloud to themselves. Of course, they aren't really talking to themselves, but are relaying information to the Mother Ship via tiny, implanted communication devices.
- 8 **Sensitivity to Earth climate:** Aliens suffer from the very different climate on earth, exhibiting symptoms of sinusitis, headaches, earaches, sore throats, and extreme irritability when the temperature rises above eighty degrees or drops below fifty degrees.
- 9 **Peculiar fashion sense:** Aliens may dress in a way that is considered tacky or in bad taste, such as socks with sandals, or white shoes after Labor Day.
